Kinvent and Model Health Announce Strategic Partnership at the 2026 Isokinetic Conference

Athens, Greece – Isokinetic Conference 2026 - At the occasion of the Isokinetic Conference 2026, **Kinvent and Model Health are proud to announce the launch of their strategic partnership**, marking the beginning of a strong collaboration between two complementary technologies dedicated to movement assessment and performance optimization.

This partnership is built on a shared ambition: to provide clinicians and sports professionals with a more comprehensive understanding of human movement by combining real-world strength and force measurements with advanced 3D motion analysis.

A Shared Vision for Clinical Innovation

Athanasios Kollias, CEO of Kinvent, comments:

"Our partnership with Model Health is built on a shared ambition: bridging the gap between measurable performance and movement quality. By combining Kinvent's field-based strength and force assessments with advanced motion analysis, we provide clinicians with a more complete understanding of human movement, enabling better decisions and better outcomes."

Antoine Falisse, CEO of Model Health, adds:

"Kinvent and Model Health are a natural fit. Kinvent measures what muscles produce, like force, strength, and power. Model Health captures how the body moves. Together, they give clinicians a more complete picture of their patients that neither could offer alone. That completeness is what we hope will drive more informed clinical decisions and, ultimately, better outcomes."s footprint across Europe, strengthened R&D capabilities, and developed an integrated product suite supporting thousands of therapists and performance professionals worldwide.

Shaping the Future of Movement Analysis

This partnership represents a key milestone in the evolution of movement assessment technologies. By combining muscular performance measurement with advanced biomechanical modelling, Kinvent and Model Health are paving the way for a new generation of more precise, comprehensive, and actionable clinical insights.

Exclusive Live Demo at the Conference

Attendees are invited to visit the Kinvent booth throughout the event to experience this innovation firsthand.

The teams will be on-site to showcase a groundbreaking approach to movement assessment, combining Kinvent's 3D Deltas and Advanced 3D motion analysis from Model Health.

This unique integration highlights how data-driven insights can enhance both performance and injury prevention.

About Kinvent

Founded in 2017 in Montpellier, France, Kinvent develops connected solutions for physical rehabilitation and human performance. Its ecosystem of wireless sensors and software provides real-time, objective data on strength, balance, and movement, enabling clinicians and sports professionals to make more informed, data-driven decisions.

Used in over 80 countries, Kinvent's technology helps bridge the gap between clinical precision and real-world application, bringing lab-quality insights directly into everyday practice.

About Model Health

Model Health is a digital health company specializing in advanced movement analysis. Its technology transforms **standard video into accurate 3D biomechanical data** using AI, computer vision, and musculoskeletal modelling.

By making motion analysis more accessible, Model Health enables clinicians and performance professionals to better understand movement, support decision-making, and improve outcomes in rehabilitation and performance.
