KINVENT and ISEPA Announce Strategic Partnership to Advance Evidence-Based Sports & Exercise Physiotherapy Worldwide

Montpellier, France

KINVENT, a global leader in connected technologies for objective assessment and rehabilitation, and the **International Sports and Exercise Physiotherapy Association (ISEPA)** are pleased to announce a strategic partnership aimed at advancing evidence-based sports and exercise physiotherapy through education, innovation, and international collaboration.

United by a shared commitment to improving clinical practice, KINVENT and ISEPA will work together to help bridge the gap between scientific research and everyday clinical decision-making. **By combining ISEPA's global network of experts with KINVENT's innovative ecosystem of objective assessment technologies**, the partnership seeks to empower physical therapists, researchers, educators, and performance professionals with the knowledge, tools, and resources needed to deliver better outcomes for athletes and patients alike.

Bridging Science and Clinical Practice

Sports and exercise physical therapy is evolving rapidly. Objective measurement is becoming an essential part of clinical assessment and return-to-performance decision-making, while scientific research continues to expand our understanding of human movement and rehabilitation.

Yet one challenge remains constant: transforming evidence into everyday clinical practice.

Through this partnership, KINVENT and ISEPA aim to make evidence-based practice more accessible by connecting education, research, technology, and clinical expertise within a global professional community.

Rather than focusing solely on measurement, the partnership is built around a broader ambition: enabling clinicians to confidently interpret objective data, integrate scientific evidence into their practice, and ultimately make better-informed decisions for every individual they treat.

A Shared Vision for the Future

Both organizations share the belief that **innovation alone is not enough to improve healthcare.**

Progress happens when technology is combined with scientific evidence, continuous education, and collaboration between researchers and clinicians.

Over the coming months, KINVENT and ISEPA will work together on a range of educational and professional initiatives, including:

- International educational webinars featuring leading experts
- Scientific and clinical educational content
- Practical case studies demonstrating evidence-based approaches
- Knowledge-sharing initiatives connecting researchers and clinicians worldwide
- Collaborative projects supporting the advancement of sports and physical therapy

Together, these initiatives will contribute to strengthening evidence-based practice while supporting continuous professional development across the global physical therapy community.

Supporting Better Decisions Through Objective Data

As rehabilitation and performance professionals increasingly adopt objective assessment technologies, the ability to interpret and apply data meaningfully has become just as important as collecting it.

KINVENT and ISEPA share a common ambition: helping clinicians move beyond measurement to informed decision-making.

By combining objective assessment, scientific evidence, and clinical expertise, the partnership aims to support physical therapists in delivering more confident, consistent, and patient-centered care.

Athanase Kollias, Founder & CEO, KINVENT

*"At KINVENT, we've always believed that **technology is only meaningful when it helps professionals make better decisions.** Partnering with ISEPA allows us to combine objective measurement with scientific expertise and education, creating new opportunities to support physiotherapists around the world. **Together, we are committed to helping transform evidence into everyday clinical practice.**"*

Looking Ahead

This partnership marks the beginning of a long-term collaboration dedicated to supporting clinicians throughout every stage of their professional journey.

Through shared educational initiatives, scientific collaboration, and the promotion of objective, evidence-based practice, KINVENT and ISEPA aim to contribute to the continued evolution of sports and exercise physical therapy worldwide.

Together, both organizations are committed to building a future where scientific evidence, objective data, and clinical expertise work hand in hand **to improve decision-making, and ultimately, patient outcomes.**

About KINVENT

KINVENT develops connected technologies that enable clinicians, sports performance professionals, and researchers to objectively assess, monitor, and optimize human movement and rehabilitation. Its integrated ecosystem combines wireless sensors, intuitive software, and actionable data to support evidence-based decision-making across healthcare, sport, and research environments.

About ISEPA

The International Sports and Exercise Physiotherapy Association (ISEPA) is the global professional association dedicated to advancing sports and exercise physiotherapy through education, research, collaboration, and international knowledge exchange. By connecting clinicians, researchers, and educators worldwide, ISEPA supports the continuous development of evidence-based practice and excellence in patient care.
